

I am an Amateur Radio operator, callsign KB2AYU. I am strongly opposed to BPL. It doesn't take an engineer to know that putting wideband RF on thousands of miles of unshielded conductors will create high levels of interference over the entire HF and low VHF bands. The only acceptable way to utilize high speed data is to use shielded cable as the cable TV companies already do. Please do not allow BPL to be installed.

Sincerely, Alan Arrison
